Northwestern University Department of Dermatology
Lincolnshire, IL
USA

Note on outcomes

Although every effort has been made to ensure that information about techniques and equipment is presented accurately in this publication, the ultimate responsibility rests with the practitioner physician. Use of these techniques or items of equipment does not guarantee outcomes or that they are the optimal procedures available. Procedure results and potential complications frequently vary between patients: physicians must evaluate their patients individually and make appropriate decisions about treatment based on each analysis. Although it is not always necessary, when a physician initiates any new therapy on a patient the use of ‘test spots’ or other tests of limited

areas should be considered for patient response before initiating the full treatment itself.

Neither the publishers, nor the editors, nor the authors can be held responsible for errors or for any consequences arising from the use of information contained herein. For detailed instructions on the use of any product or procedure discussed herein, please consult the instructional material issued by the manufacturer. Some of the use of technology and procedures described in this text may be ‘off label’ as regards the FDA in the USA and may also not have EC approval in Europe, and are described as such, to be used at the discretion of the physician.
